### **Kunk Awarded Microsoft MVP**

East Lansing, Mich. — A.J. Boggs & Company, a Michigan-based software development firm, announced that one of the firm's lead consultants, Joseph Kunk, has (for the third year in a row) received Microsoft's Most Valuable Professional (MVP) for his work as a leader in the Microsoft developer community. "We are very proud of Joe's continued selection as a Microsoft MVP. He is a great mentor of software developers and a strong leader in our firm and in the developer community", stated Clarke Anderson, CEO of AJBoggs. As a MVP, Joe has access to Microsoft (MS) developers and executives who are leading new technology developments. He has access to a full suite of Microsoft technology, early releases of systems, and connects to an MVP network with peers and MS insiders with early access to technology through a variety of Microsoft programs on the cutting edge of the software and hardware industry.

Mr. Kunk has been selected as an "exceptional technical community leader" for his commitment to sharing high quality, real world expertise in offline and online technical communities. His activities include:

- President of the Lansing and Flint .NET users groups (GLUGnet Lansing and Flint)
- An organizer of the Lansing's Day of .NET conference
- Author of numerous VB articles, including Visual Studio Magazine
- Blog posts at [jbknet.blogspot.com](http://jbknet.blogspot.com)
- Member of LINC board (2008)
- Member of Lansing IT Council board (2009)
- Member of LCC IT Advisory Council

Mr. Kunk is proficient in application and system architecture, integration, software development and database design. He has been engaged in the planning, design, installation, integration and customization of Microsoft solutions for over twenty years.

Microsoft MVPs are a highly select group of experts that represents the technical community's best and brightest, and they share a deep commitment to community and a willingness to help others. Over 100 million people participate in technical communities; however, there are less than 5,000 MVPs worldwide. Outstanding technical community members are nominated by their peers, Microsoft employees, and MVPs. Each year a panel of Microsoft employees reviews the contributions of each nominee for quality, quantity, and level of impact on the technical community.
